

Figure 1

1. The present invention relates to a handheld electronic device for use in a golf course. The device is designed to be carried by a golfer and to provide a means for recording and displaying golf statistics. The device includes a display screen, a keypad, and a small antenna. The display screen shows a graphical representation of a golf course hole and the ball's position. The keypad allows the golfer to input data such as the number of strokes taken and the distance to the green. The antenna is used for communication with a base station or other devices.
